POSTDOCTORAL FELLOW

The University of Texas Health Science Center at San Antonio

A Postdoctoral Research position for a NIH-funded project is available in the laboratory of Dr. Sumathy Mohan at the Department of Pathology, University of Texas Health Science Center at San Antonio, Texas, USA. The overall goal of the laboratory is to better understand the mechanisms of endothelial dysfunction that leads to delayed vascular wound healing in type-1 diabetes. The candidate should have strong biochemistry and molecular biology background. Experience in cloning procedures, and handling/performing surgeries in mice will be a plus. A Ph.D. with at least two years of experience in basic biochemical and molecular techniques is required. Preference will be given to self-motivated candidate and ample training opportunities will be provided for career development. Please send the following materials to e-mail: mohan@uthscsa.edu:

A cover letter, curriculum vitae, related peer-reviewed articles, and contact information of three references.

“All postdoctoral fellow appointments are designated as security sensitive positions” and “The University of Texas Health Science Center at San Antonio is an Equal Opportunity/Affirmative Action Employer.”
